

# City Update

September 2012

Volume 8 Number 9

# 'Mom, there's nothing for us to do.' Heard that before? Is it accurate?

Ever wondered what the Loveland city government offers for local young people? Many people do.

Through the comments offered by respondents to the annual City Quality of Life Survey, it's become apparent that many members of our community are unaware of the multitude of opportunities available to Loveland children by their city government. We believe the list is broad and diverse.

The City offers a great variety of events, classes, workshops, facilities, competitions and more. Activities range from swimming lessons for toddlers to hands-on experiences for teenage future police officers.

Opportunities exist during the day, after school, evenings, weekends, during school holidays and the summer. There's something available almost

every day of every season.

Inside this edition of City Update, we've put together a list of what's available. We've probably missed a few items, and we wouldn't be surprised if something new has been added just recently. We hope you'll find something that your child or grandchild would find of interest.

# Help LWP keep the lights on

Loveland Water and Power (LWP) installs, operates and maintains all of the roughly 6,000 streetlights throughout the City. That's a lot of lights to keep track of and some problems may go unnoticed by repair crews since lights are not on during the day.

Residents can help LWP's repair crews keep Loveland's lights turned on and promote safety for drivers and pedestrians by reporting burned out or damaged streetlights.

When reporting a streetlight in need of repair residents should provide the following information:

- Resident's name and contact information – in case LWP needs more information.
- The pole number yellow twodigit number located roughly eye level in the middle of the pole.
- The street address and closest major cross streets to the pole for example: 1234 Taft, Northwest corner of Taft and Hwy 34.

• The nature of the problem – such as burned-out light, the light being on in the daytime, cycling on and off, damaged pole (leaning, tipped over), broken glass, etc.

There are two ways to report a malfunctioning streetlight. Residents can make a report online using the Streetlight Trouble Report form located on the City's website at www.cityofloveland.org/StreetLightOutage or by calling LWP dispatch, 962-3581, Mon.-Fri., 7:30 a.m. to 4:30 p.m.

Once the streetlight problem has been reported, LWP's goal is to respond and repair the malfunctioning streetlight within two business days. With residents' help LWP can keep the lights turned on and our community illuminated and safe.

# Athletics needs volunteer coaches

The City's Parks & Recreation department is actively recruiting volunteer coaches to coach the following youth sports:

Soccer, Flag Football & Volleyball Sept. 4 – Oct. 20

#### Basketball

Oct. 29 – Dec.15

Two 1-hour weeknight practices. Games are on Saturdays.

For more information call 962-2450 or visit the City's Volunteer Program webpages at www.cityofloveland.org.

# Loveland library's computers have users' heads in the clouds

When the Loveland Public Library underwent its renovation more than a year ago, library staff wanted to design their new computer labs to support the cultural and technological shift that was taking place towards digital and mobile communication and information. They also had to figure out how to increase the number of computers for public use while not increasing maintenance and labor for library staff.

The solution was in the clouds—or rather, in cloud computing. In place of standard stand-alone PCs, the library installed a cloud computing system that streams virtual desktops to 122 computers around the library.

Cloud PCs are computers that only

The new computers contain no moving hard drives, are quiet and produce very little heat because they use so little energy; less than 15 watts each – a fraction of the 54-90 watts consumed by the old PCs. The cloud system has enabled the library to reduce its carbon footprint while greatly expanding computer access to Loveland residents.

An article authored by library staff about their new cloud computing

**Above:** The library's iLearn classroom has served more than 500 students in various computer classes since the beginning of the year.

**Left:** To accommodate the community's evergrowing demand for public computing, 48 new computers and carrels were included in the design of the iExplore lab.

system was recently published in *Colorado Libraries*, an online library journal. To view the full article, go to www.coloradolibrariesjournal.org/articles/building-computer-labs-out-clouds.

The library was also honored as a Computerworld Honors Laureate in the digital access category. The library was awarded for applying technology that had measurable results in meeting a specific social need plus demonstrating humanitarian benefits.

contain the necessary hardware to interact with the user. The application data, hard drive storage and memory live on a server elsewhere on the network.

The library is able to host so many computers now because updating them in the cloud is so easy. Before the renovation, technology staff had to go to every individual machine to install software, operating systems, licensing updates, etc. Today, changes only have to be made one time in one place to update all the computers.

Auditorium as part of a national tour. McCall Smith, who has written more than 60 books and is known for his No. 1 Ladies' Detective Agency series, will discuss his writings, his ideas and his experiences living in Africa and Scotland. A book signing will follow the presentation.

The Friends of the Loveland Public Library are sponsoring this event. For tickets and information go to visit www.friendsofthelovelandlibrary.org or call 962-2402.

# Green library earns Gold award

The Loveland Public Library was recently awarded the LEED® Gold certification from the U.S. Green Building Council for its use of efficient building systems and materials for the library's expansion and renovation last year. The library is the first City of Loveland building to receive LEED certification.

Using LEED as a guide, the library selected materials and efficiency strategies that would reduce water use, reduce energy use, improve the quality of the indoor environment, increase natural light and promote alternative modes of transportation to and from the library—all tenets of LEED construction.

Improvements to the library include:

- New water fixtures that reduce water consumption by 48 percent
- High performance, operable windows that help regulate and maintain a comfortable interior temperature
- Efficient electrical lighting
- Skylights throughout the structure to increase natural daylight
- High-efficiency HVAC system in the expanded spaces
- High performance insulation resulting in a 23 percent reduction in energy use for heating and cooling the building
- Use of non-toxic materials
- Use of recycled building materials (more than 30 percent of building materials came from recycled content)

The City's pursuit of LEED certification for the renovation was consistent with the City's interest in finding creative and sustainable ways

(continued on page 4)

### Loveland sculptures travel to travelers

While sculptures are not typically prized for their portability, they are prized for their beauty and ability to inspire feelings and thoughts in those who view them. Recently, four sculptures by Loveland artists made the trip from Loveland to Denver International Airport (DIA) where they are now on display through November.

Each sculpture is distinct in its subject and mood. "We wanted to provide viewers at the airport with a variety of genres something for everyone was our goal," said Marcie Erion, business development specialist for the Office of Creative Sector Development with the City. "We are thrilled to be able to showcase Loveland and the Loveland arts community to visitors from all over the world.'

Erion contacted DIA last February to get the ball rolling. Once DIA approved her request for an installation she coordinated with local sculptors to choose the art and arrange for the installation.

All of the sculptures are on the sixth floor of the airport; two on the east side of the terminal and two on the west side.

# Name selected for HP/Agilent space

The HP/Agilent open space property has a new name – River's Edge Natural Area. Loveland residents submitted more than 150 name suggestions with references to local wildlife, plants, history and people.

 $\mathbf{a}$ 

After reviewing all submissions, staff and the Open Lands Advisory Commission selected River's Edge Natural Area based on the natural features and location of the site. Although there was a desire to honor the legacy of Hewlett-Packard, that name was not selected due to possible confusion about current ownership of the site.

The site is located along the Big Thompson River in central Loveland. It will be accessible from the recreation trail and consists of 121 acres including three ponds, wetlands and upland prairie.

The plan to enhance the habitat and aesthetics of the natural area are is available at www.cityofloveland.org/ riversedge.

# 'Birds' coming to roost at Museum/Gallery

Birds in Art, a world-renowned exhibition, is on display through Oct. 28 at the Loveland Museum/Gallery. Each year, hundreds of artists from all over the world vie for placement in this juried exhibition, which this year features 50 paintings and ten sculptures by 60 artists from eleven countries.

Films, lectures and hands-on activities will accompany the exhibit. Information on all the activities may be found in the Cultural Services section of www.cityofloveland.org.

"The Birds in Art exhibition is a wonderful opportunity to see many creative approaches to this subject matter, from the high detail of representational art to dreamlike images more abstract in nature," said Maureen Corey, curator of art at the Museum/Gallery.

Admission is \$5 per person and tours of the exhibition are included with the cost of admission at noon on Fridays.

to save on operating costs, while designing a building that would be comfortable and pleasing to patrons.

The renovation not only met but exceeded project goals for construction waste diversion and use of recycled materials. The City always incorporates energy efficiency into its construction projects and the success of the library project will encourage LEED in future sustainable renovations and construction.

"The City's efforts toward continuous improvement and cost savings with each capital project fit perfectly with the LEED process. We're very pleased with the outcome and look forward to future opportunities like this one," said Ken Cooper, City of Loveland facilities operations manager.

City Update is a monthly publication of the City of Loveland. Residents receive City Update according to their utility billing cycle. Timeliness of the information may be affected by recipients' billing schedule. City Update is also available around the first of every month on the City's website at www.cityofloveland.org. Your comments are encouraged and welcomed at 962-2302, Andy.Hiller@cityofloveland.org.
