

Protect Colorado's Landscape

Firewood can carry devastating, non-native tree insects and diseases such as:

New Introduction!
Sirex Woodwasp
threatens ponderosa and
lodgepole pine forests

**Emerald Ash
Borer Beetle**
has killed 20,000,000
ash trees in the Midwest

Gypsy Moth
has defoliated thousands
of acres of eastern
hardwood forests

**Help Keep These Devastating
Pests Out of Colorado!
What Can You Do?**

- Use firewood from Colorado
- Be sure that it's been debarked, split, and well-seasoned
- And if you travel, buy firewood at your destination
