#### PROJECT DESCRIPTION / NECESSITY

Facility Major Maintenance provides for capital renewal and maintenance projects across city facilities to ensure their continued safe and reliable operations. Yearly projects include repairs and replacements related to HVAC, mechanical systems, building automation, electrical, plumbing, security, parking lots, roofing, concrete, and interior finishes including carpet, paint, lighting, remodel, and furniture.

#### PROJECT DESCRIPTION / NECESSITY

Loveland has received two NFRMPO grants (\$499k & \$329k) to apply towards the design/construction of a modest \$1.2M CNG Fueling Station at the current City Fuel Farm. The City's matching funds of \$372k will be split between Fleet Fund 500 and the Solid Waste Fund. Over time, about 60 heavy-duty trucks within the City's fleet are strong candidates to replace with CNG engines. For details, please see the staff report by Mick Mercer & Gus Brown entitled CNG Action Plan, December 2018.

Please reference the staff analysis/report entitled CNG Action Plan, December 2018. CNG fuel costs per gallon is about 50% less than diesel fuel (CNG @ \$1.25 vs diesel @ \$2.50). By replacing 44 heavy-duty trucks incrementally over the next 10 years, the fuel savings would approximate \$1.6M. Projected payback is 6.25 years (projected fuel savings less out-of-pocket capital expense). Of course, CNG has numerous air quality and water quality benefits over diesel fuel, with greatly reduced greenhouse gas emmisions. CNG will also increase emergency resiliency during petroleum shortages due to natural disasters/weather emergencies. If diesel pumps go down or supplies run low, CNG provides a backup plan for certain City crews and outside agencies who assist with Loveland response/recovery.

#### PROJECT DESCRIPTION / NECESSITY

The proposed project creates an expansion/addition to the Fleet Maintenance Garage facilities to create the additional repair bays needed to keep pace with the City's growing fleet. The current Fleet Maintenance Garage was built in 1985 and includes 15 work bays. The expansion is expected to allow for an additional 4 work bays.

Capital Improvement Program

#### **Start Date**

1/1/2020

#### PROJECT DESCRIPTION / NECESSITY

The fuel tanks at the City's refueling facility have surpassed their useful life expectancy. While diligent maintenance and monitoring over their 30+ years has allowed usage beyond their normal life expectancy replacement is needed. Replacement of the tanks will provide new tank warranties and enhanced leak detection and safety. Staff encourages the use of current technology in tank construction, leak detection, and service to be implemented as well with the tank replacement.

#### PROJECT DESCRIPTION / NECESSITY

In 2017, an update of the 1998 ADA Self Evaluation and Transitional Plan for Parks and Recreation facilities and sites was completed. This project will correct deficiencies in compliance with Federal mandates set forth in Title II of the Americans with Disabilities Act. Staff anticipates a 5-7 year transition plan to remove all barriers necessary for compliance with Title II.

#### PROJECT DESCRIPTION / NECESSITY

The City of Loveland developed the old Larimer County fairgrounds into a 48.5 acre community park in 2008. When the Park was constructed, there were insufficient funds to complete all identified project components. Proposed improvements for Phase II may include site lighting, picnic shelters, volleyball, irrigated turf and landscape improvements in the area east of the old grand stands and west of ball field complex 7-10 (5 Acres). Calculations indicate 0.38 FTEs would be required to provide current levels of service for routine maintenance of park facilities and grounds.

#### PROJECT DESCRIPTION / NECESSITY

Kroh Park totals 38.54 acres. The upper level (26.54 acres) was developed in 1996. The lower 12 acres of the site remain undeveloped at this time. This project includes the development of the lower portion of Kroh Park off of Monroe Avenue. Site development, which may be limited due to soil and high ground water conditions in the area, may include: a dog park, disc golf course and/or off-street parking. Calculations indicate 0.92 FTE's would be required to provide current level of service for routine maintenance of park facilities and grounds.

#### PROJECT DESCRIPTION / NECESSITY

The Parks and Recreation Master Plan identifies the need for at least one new neighborhood park which the Department plans to develop in 2020. The Willow Bend property in southeast Loveland was purchased in 2016. This request includes land/water acquisition for this site, as well as design and development of the 12 acre park. This park will be developed as the first all-inclusive playground in Loveland. Calculations indicate 0.77 FTEs would be required to provide current level of service for routine maintenance of park facilities and grounds.

#### PROJECT DESCRIPTION / NECESSITY

As Loveland continues to grow, land and natural corridors need to be protected for the preservation of wildlife habitat and natural beauty in Loveland. Open Lands also provide a highly desirable passive recreation experience for the city. This plan includes acquisition of properties to preserve land in and around Loveland, and developing public access through a network of trail systems connecting people to natural places. Loveland receives a portion of the Help Preserve Open Spaces sales tax through Larimer County and has an internal Open Lands CEF which provides additional funding for these projects.

#### PROJECT DESCRIPTION / NECESSITY

Park Renovation Projects is an ongoing maintenance program with shelter updates, roof replacements and general facility upgrades and improvements. In recent years, this funding has been focused on upgrading restrooms to ensure ADA compliance. In 2020, the bulk of this funding will be used to address deferred maintenance on park shelters.

#### PROJECT DESCRIPTION / NECESSITY

The City of Loveland Parks & Recreation Department must expand its water rights ownership in order to ensure the current service level at existing parks and new parks. The Parks Division currently leases water from time to time to supplement current owned water rights, and future leases may become less available to the division as developments in and around Loveland buy water shares.

#### PROJECT DESCRIPTION / NECESSITY

The 29th Street and Madison Avenue Intersection Improvements project was funded by a 2016 City Council supplemental appropriation (\$500,000) for additional transportation projects intended to provide congestion relief on US 34. This project, along with the Madison Avenue Improvements - Silver Leaf to 29th project, are the first of three construction phases for the Madison Avenue corridor. This project includes the construction of a 2-lane, 4-leg modern roundabout. The design and right-of-way phases will be funded and completed earlier with the 29th/Madison Intersection and Corridor Design project. This route is a major feed from northwest Loveland to US 34, east to I-25 and other locations.

This first construction phase is planned for 2023.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

The 29th/Madison Intersection and Corridor Design project consists of the design and right-of-way acquisition for a 3-Phase corridor construction project on Madison Avenue between Silver Leaf Drive and 37th Street. This route is a major feed from northwest Loveland to US 34, east to I-25 and other locations and is intended to provide congestion relief on US 34.

Design will begin in 2019 with right-of-way acquisition in 2021-2022 and construction beginning in 2023. The three construction phases are as follows:

- -Phase 1 Madison Avenue widening from Silver Leaf Drive to 29th Street. Construction will include improvements to the Madison/29th intersection.
- -Phase 2 Construction consists of a roundabout at the Madison/37th intersection.
- -Phase 3 Madison Avenue widening from 29th Street to 37th Street.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

**Start Date** 

1/1/2020

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREA37th Street Improvements US287 to Lincoln1EN1802NA

#### PROJECT DESCRIPTION / NECESSITY

The 37th Street Improvements - US 287 to Dry Creek project is a continuation of a larger project that began design in 2018 and will begin construction in 2019. The larger project constructs improvements on 37th Street from US 287 to Monroe Avenue and includes a bridge over Dry Creek, a new section of roadway and a roundabout at 37th Street and Monroe Avenue. During the latter part of project design, the design consultant informed the City that construction costs have risen from the initial estimate. The rise in construction costs stem from the need for a free-span bridge versus box culverts and an increase in construction material and utility locating costs. Because of the cost increase, the project will be broken up into two construction phases with the bridge over Dry Creek constructed in the second phase during 2020. It is estimated that an additional \$1,900,000 will be required to construct Phase 2 of this project. Including 1% for the Arts, we are requesting that \$1,919,000 in Capital Expansion Fees be appropriated in 2020 to complete this project.

**REQUEST TYPE** 

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

The 57th Street and Taft Avenue Intersection Improvements project consists of replacing the existing span-wire traffic signals with pole and mast arm traffic signals at the ultimate design location, extension of an existing box culvert and making ultimate improvements to the approach roadways.

The design phase is planned for 2026 and the construction phase is planned for 2027.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1N/AAll Projects

#### PROJECT DESCRIPTION / NECESSITY

The 57th Street and Wilson Avenue Intersection Improvements project is intended to provide a safer environment for the traveling public. In the past five years, there have been 19 accidents at this intersection with the majority of the accidents involving left turn movements and almost half of the accidents resulting in an injury. Considering the increased traffic and accidents at this intersection, it is time for a signalized intersection. This project includes the construction of a fully signalized intersection with the signal poles and mast arms set at the ultimate roadway design location.

The design phase is planned for 2020 and the construction phase is planned for 2021.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

The 57th Street Reconstruction - Wilson Avenue to Taft Avenue project consists of the reconstruction of approximately 1 mile of 2-lane rural road to meet current 2-lane Arterial Roadway standard. Due to increasing traffic volumes and poor storm drainage, the existing roadway requires extensive annual maintenance. Improving this section of roadway will increase safety for the motoring public and allow for maintenance funding to be utilized in other areas of need.

The design phase is planned for 2027 and the construction phase is planned for 2028.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

This request is to add \$250,000, in perpetuity, to the existing Annual Bike, PED (Pedestrian) and ADA (Americans with Disabilities Act) Ramps project. The funds will be used to increase the rates of replacement of both substandard ADA ramps and sidewalk infrastructure gaps. This will provide a direct safety and connectivity benefit to the general public and to those who face mobility challenges due to disability. It should be noted that, due to state statutes, Capital Expansion Fees may not be used to fund this need.

The City of Loveland has over 2,500 identified sidewalk gaps and approximately 3,000 substandard ADA ramps. At current funding levels, it will take approximately 400 years to eliminate these public safety deficiencies. The 2012 Bicycle and Pedestrian Plan, which is currently being updated, lists only the first 300 sidewalk gaps at a total cost ranging from a low of \$7 million to a high of \$14 million. The additional funding requested will double the current funding and will greatly benefit pedestrian safety and increase walkability by reducing the substandard infrastructure more quickly. A larger fund pool will also have a cost benefit by allowing the bidding of a larger annual construction project, which will, in turn, provide the City with more economical construction costs.

Dependent on workload, Transportation Engineering either designs the construction plans in-house or contracts with an engineering consultant. Dependent on site constraints, current funding levels allow for design of 3 to 6 gap locations annually, which are then bid as a single construction project. Transportation Engineering manages the project from design through construction.

The General Fund total includes 1% for the Arts.

#### PROJECT DESCRIPTION / NECESSITY

The Boise Avenue Traffic Calming - US 34 to Park Drive project is intended to provide roadway infrastructure improvements along Boise Avenue in helping to address the public concerns for pedestrian safety, speed and provide a balance between all corridor users. In 2016, the City hired an engineering consultant to address the public's concerns along Boise Avenue north of US 34. The consultant provided its findings with solutions in their report titled 'North Boise Avenue Corridor Study Report'. The consultant has recommended several medians, intersection bump-outs, a rectangular rapid flashing beacon (RRFB) and restriping of the corridor as solutions to calming traffic and providing increased safety for pedestrians.

The design phase is planned for 2020 and the construction phase is planned for 2021.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

Development is required to fund up to the cost of a collector street equivalent for the portion of streets within and adjacent to their property. In some cases, and per the 2035 Transportation Plan, the development is also required to oversize the adjacent arterial streets to their ultimate width along their property. In these instances, the City will reimburse the developer for the street oversizing costs at the time that the actual roadway improvement would have been required to meet traffic demand and payment is made on a first-in-first-out basis.

Individual projects for 2020-2029 include:

- US 34/Sculptor Drive intersection
- Sculptor Drive from the intersection of US 34 south through Mountain Lion Drive intersection
- Taft Avenue/14th Street SW intersection

## PROJECT DESCRIPTION / NECESSITY

The Madison Avenue Improvements - Silver Leaf to 29th project, along with the 29th and Madison Intersection Improvements project, are the first of three construction phases for the Madison Avenue corridor intended to provide congestion relief on US 34. This project includes widening of Madison Avenue from Silver Leaf to 29th Street to a Major Arterial (4-lane) roadway standard. The design and right-of-way phases will be funded and completed earlier with the 29th/Madison Intersection and Corridor Design project. This route is a major feed from northwest Loveland to US 34, east to I-25 and other locations.

This first construction phase is planned for 2023.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

In 2016, the City entered into a regional agreement with Larimer County to return revenue generated through increased property tax revenue resulting from the 2015 re-assessment process effective 2016 - 2020\*. This co-operative regional effort is projected to generate \$5 million for the North I-25 widening project. The funding amount and duration matches the County's distribution to the City and was memorialized by City Council resolution in March 2016.

\*Payment is made in the following year. First payment was made in 2017.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1N/AAll Projects

#### PROJECT DESCRIPTION / NECESSITY

The Monroe Avenue and 33rd Street Intersection Improvements project consists of constructing a mini roundabout within the intersection. Currently, the intersection consists of a 4-way stop condition with the north leg containing a large median where a Cottonwood tree used to reside. The north/south lanes have a 12-foot horizontal offset through the intersection. The proposed mini roundabout will increase traffic and pedestrian safety through the intersection and it will also result in traffic calming for the neighborhood. With the projects that the City is constructing to the north, we anticipate additional traffic down this corridor.

The design phase is planned for 2026 and the construction phase is planned for 2027.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

# 211-23-232-1700-211-PW-Engineering-Street Rehabilitation

**REQUEST NAME** 

TRANS - Rehab - Street Rehabilitation Program

#### REQUEST CODE

CIP-211-23-232-1700-20-552

#### REQUEST TYPE

Capital Improvement Program

#### **Start Date**

1/1/2020

#### PROJECT DESCRIPTION / NECESSITY

The Street Rehabilitation Program consists of a pavement management process to provide street treatment recommendations; five street maintenance contracts, two concrete repair contracts and other associated support work. The street system contains over 7.3 million square yards of pavement surface and more than 600 miles of curb, gutter, and sidewalk. The funding for this Program is used to manage and maintain this street system within the following programs:

#### The Annual Street-Resurfacing Program

Provides for the planning and implementation of street surface repairs. This includes planning of pavement repairs, asphalt overlays, hot-in-place recycling of pavements, chip and seal products, occasional spot repairs or safety improvements, supporting Traffic Operations on street maintenance projects, concrete repairs and asphaltic concrete and crack sealing materials for use by Street Maintenance.

#### Target Area

Provides for repairs to concrete in the right of way in advance of the various street-resurfacing programs. The focus is on upgrades to ramps that accommodate citizens with disabilities (ADA) and for the repair of drainage. The ADA repairs are federal requirements and the drainage repairs provide for longer life to the street resurfacing.

#### Concrete Cost Share Program

Per City Code, property owners are responsible for maintenance and replacement of their property fronting curbing, gutters, and sidewalks. Resolution 18-2005 allows for financial participation in that effort by the City. With our aging infrastructure, more sidewalk hazards appear each year. Funding this program at a higher level will benefit the entire city by making the program available to more residents, thus eliminating more hazardous locations. The program is restricted to residential owner-occupied homes.

# Alley Repair Program

The City of Loveland is responsible for the maintenance of over 200 alley rights of way. This funding provides the beginning of a formal alley repair/reconstruction program for alleys that have deteriorated to a point where normal maintenance is insufficient. Historically, funds for this work have been taken from the Street Rehabilitation Concrete program on an "as needed" basis, causing the Concrete program to fall behind in maintenance and the alleys to receive only minimal upkeep.

#### Reconstruction of City Streets

This funding provides the ability to reconstruct streets without negatively impacting the annual Street Resurfacing budget. Streets are reconstructed whenever they have deteriorated beyond a point where regular resurfacing methods are no longer cost-effective. Currently, when a reconstruction project is required, it is funded using Street Resurfacing funds. Due to our aging infrastructure, a reconstruction project is necessary approximately every other year and generally reduces the funds available for basic maintenance by up to 16%. This reduction in basic maintenance causes a downward spiral where more streets will require more costly reconstruction in the future.

#### PROJECT DESCRIPTION / NECESSITY

The Taft and Eisenhower Intersection Improvements project is the remaining work from the larger Taft Avenue Phase II project and consists of roadway widening from 11th Street to Westshore Drive and the installation of a new traffic signal at the Taft/Eisenhower intersection. Eisenhower intersection improvements also include dual northbound and southbound left turn lanes and concrete medians. \$1.7 Million of the project cost was funded by the 2016 City Council supplemental appropriation for additional transportation projects intended to provide congestion relief on US 34. \$3,330,637 of the project cost is being funded by a Congestion Mitigation & Air Quality (CMAQ) awarded grant from the North Front Range Metropolitan Planning Organization.

Final Design and right of way acquisition will occur in 2021 and construction will commence in 2022.

Additional project information is available through the Public Works Department. Costs shown are

#### PROJECT DESCRIPTION / NECESSITY

The Taft Avenue Widening - Westshore Drive to 22nd Street project consists of widening Taft Avenue from Westshore Drive to 22nd Street to a Major Arterial (4-lane) roadway standard. This project is a continuation from the Taft Avenue Phase II project consisting of widening Taft Avenue to 29th Street to a Major Arterial (4-lane) roadway standard.

The design phase is planned for 2028 and the construction phase is planned for 2029.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

#### PROJECT DESCRIPTION / NECESSITY

The US 34 Widening - Denver Avenue to Rocky Mountain Avenue project is for the widening of eastbound and westbound US 34 to include a third through lane from Denver Avenue to Rocky Mountain Avenue. As part of this project, curb, gutter, and sidewalk gaps will be filled along both sides of the highway. This project does not include construction of the center median hardscape. \$1,361,496 of the project cost is being funded by a Surface Transportation Block Grant (STBG) awarded grant from the North Front Range Metropolitan Planning Organization.

Construction in 2020 will consist of sidewalk on the north side of US 34 between Fall River Drive and Rocky Mountain Avenue. Design of the eastbound third through lane will occur in 2022. Construction of the eastbound third through lane will commence in 2023.

Additional project information is available through the Public Works Department. Costs shown are engineering estimates until the project is bid.

WA - 16" P8 Waterline Extension on E Eisenhower

CIP-300-46-310-2903-20-936

Capital Improvement Program

#### **Start Date**

1/1/2020

**PROJECT NAME** PROJECT PRIORITY # PROJECT# PROJECT AREA No Project N/A All Projects

#### PROJECT DESCRIPTION / NECESSITY

The City's water system is comprised of numerous pressure zones. All water infrastructure east of Boyd Lake Avenue and north of East Eisenhower is in the P8 water (pressure) zone. There are currently two feeds (from the gravity pressure zone) into the zone in Boyd Lake Avenue. The water master plan calls for a third connection to the P8 zone crossing East Eisenhower at Rocky Mountain Ave. This project extends the required 16" waterline, along the south side of East Eisenhower, as development occurs along adjacent properties. This project will be done in phases.

Phase 1 South of 34, Lot 1 Phase 2 South of 34, Lot 2

Phase 3 South of 34, Lot 3

Phase 4 Under 34

#### PROJECT DESCRIPTION / NECESSITY

Install a 16" water line in Granite Street between 57th Street and 50th Street. The 16" waterline will provide a valuable loop and has been recommend by hydraulic modeling studies. This waterline will ensure adequate levels of service in both pressure and flow to customers in North Loveland, and will provide needed redundancy in the event of a water line break.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1N/AAll Projects

#### PROJECT DESCRIPTION / NECESSITY

Build a 2.0 MG Tank at Dakota Ridge for the P2 Zone. A 2.0 MG storage tank is needed to meet future demands in the P2 Zone. The timing of the tank is estimated based on the proposed development in the area. The additional water storage will allow the proposed 29th Street pump station P2 expansion to operate more efficiently, rather than having existing pumps running continuously.

# PROJECT DESCRIPTION / NECESSITY

The 29th Street steel tank is one of the most utilized storage facilities supporting over a quarter of the City's water customers. This project will provide a second 5.0 million gallon (MG) storage tank at this critical location.

The additional storage will offer redundancy and reliability for water customers in Northwest Loveland. As of 2015, the City is 3.5 MG short of required storage in the gravity zone (not including P8). This is based on American Water Works Association (AWWA) recommendations of having storage of 75% of max daily demand (MDD). This value does not include any dead storage in existing tanks.

#### PROJECT DESCRIPTION / NECESSITY

WA - Water Main Replacement Projects

34" Water Line Valve Insertions - \$227,265 Study and implementation of improvements, primarily the insertion of butterfly valves, for isolation, of the 34" steel waterline that runs along the Arkin's Branch railroad. Additional assessment of the pipe's condition and possible cathodic protection improvements. The existing 34" steel waterline, installed in 1962, has no isolation valves from Namaqua Avenue to N. Colorado Avenue (~10,000 ft). From the Riverview Drive junction vault (east of Rossum Drive), there is one isolation valve prior to Namaqua Avenue. The aging transmission line feeds numerous distribution lines and presently is very difficult if not impossible to isolate for repairs.

#### PROJECT DESCRIPTION / NECESSITY

The City's existing 36" steel water transmission main was constructed in 1962 and is showing signs of significant deterioration from external corrosion. Staff has made numerous repairs and pipe river crossing replacements completed in 2015 have shown significant external corrosion where the pipe was laid on bedrock and backfilled with native cobbles. In 2016 significant leakage out of the pipe due to corrosion holes was verified through the use of a free swimming inspection tool. Lining of the deteriorating 36" steel waterline will reduce risk of catastrophic failure, decrease repairs, reduce water loss, and extend the assets useful life for decades to come.

#### PROJECT DESCRIPTION / NECESSITY

37" St. Waterline Extension.

Public Works is installing a bridge and road over the Greeley Loveland Irrigation Canal just east of the intersection of E. 37th St. and N. Garfield Ave. This will complete a critical east west street connection. When this street work is under construction the City will complete a long planned for tie-in of the water main over the ditch. The existing waterline has been stubbed out on each side of the ditch in anticipation of this project.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1N/AAll Projects

#### PROJECT DESCRIPTION / NECESSITY

Metallic pipe materials are susceptible to corrosion in the right environment. This project includes installing anodes on both transmission mains as a source metal (as opposed to the pipe) for any corrosion cell that may form along the pipeline. These anodes are typically magnesium, which is more active (has a higher negative potential) than the protected pipe. The existing waterlines have little or no anode protection left based on field readings. Therefore, corrosion is and will continue on the mains.

#### PROJECT DESCRIPTION / NECESSITY

Chasteens Grove Water Booster Station.

As water demands continues to increase a water booster station, situated at the Water Treatment Plant, to convey high flows to customers. The pump station is needed for flow rates of 36 million gallons per day (MGD) and higher. The current transmission piping system has too much headloss in these high flow conditions, making the pump station a necessity.

#### PROJECT DESCRIPTION / NECESSITY

Fort Collins Loveland Water District (FCLWD) Interconnect at Crossroads Tank
The City of Loveland and the Fort Collins Loveland Water District (FCLWD) each have an elevated water
tank at Crossroads Blvd. just west of the Wal-Mart Distribution Center. There is piping that connect the
two systems at this location but the system's are isolated through existing valves. The City and FCLWD
will install a meter vault that will allow either system to draw from the other, in an emergency, and be able
to quantify the water used.

#### PROJECT DESCRIPTION / NECESSITY

Fire Training Grounds Water Metering.

The water that is utilized at the fire training grounds for firefighting training is un-metered. Consumption is presently estimated. In order to best quantify the water used and reduce the amount of unaccounted water (difference between production and metered totals) the City will install meters on either side of the training grounds. The meters will be housed in a vault and involve associated piping and valving.

## PROJECT DESCRIPTION / NECESSITY

Mariana Butte Pump Station Pump Replacement.

An existing pump station was installed in the late 1990's to serve the Mariana Butte area water. Based on other system improvements this pump station serves as redundancy should problems arise in the primary piping or pump station for the area. Given the age of the pumps and the difficulty in getting parts for the existing hydro constant pumps, the pumps are to be replaced with modern equipment that can more easily be serviced.

#### PROJECT DESCRIPTION / NECESSITY

The Morning Drive Pump Station was constructed in 1976. The station delivers water to the 29th Street storage tank, which serves over a quarter of the City's customers. This project will upgrade the Morning Drive Pump Station (pumps, piping, valves, controls, Motor Control Center (MCC) etc.). Equipment is aging and the pump station will require an upgrade to re-size facilities to meet the needs of the City's growing system. Existing MCCs are over 30 years old and are becoming obsolete. If there is a MCC failure, we will have to try and find parts and pay a premium for them. The MCCs are critical to the pumps at Morning Drive running and supplying water to the 29th Street tank.

#### PROJECT DESCRIPTION / NECESSITY

Namaqua Hills Pump Station

Currently there is a pump station that feeds the upper loop of homes in the Namaqua Hills Subdivision. The pump station was built in 1962 and the components have reached the end of their useful life. The pumps, piping, and SCADA equipment need to be replaced to ensure reliable service to customers.

#### PROJECT DESCRIPTION / NECESSITY

With the recent Water Treatment Plant expansion project a new chemical building and chemical feed system was put into operation. Soda ash is used to adjust the pH of the water. The no longer used old soda ash storage and feed area needs to be rehabilitated to meet the current needs of the facility.

#### PROJECT DESCRIPTION / NECESSITY

WA - Water Line Replacement Projects

Replace aging water infrastructure. Typically, most communities face increasing replacement costs as the age of installed infrastructure advances. After decades, water pipes, valves, and fire hydrants reach the end of their service life and require increasing maintenance and rehabilitation costs. In some cases, these costs can become unacceptably high and the utility is best served by replacing this infrastructure.

#### PROJECT DESCRIPTION / NECESSITY

WTP Backwash Pond #8.

A step in the water treatment process involves the filtering of water. As the water is filtered the filters slowly become clogged. The process of cleaning the filters (backwashing) creates backwash water which is pumped to a series of ponds where the sediment, or sludge, can settle out. As demand at the Water Treatment Plant (WTP) increases there is need for another backwash pond. The pond project will include grading, potential import of fill material, concrete placement, and all necessary piping and valves.

The building is needed to store the loader, boat, miscellaneous equipment, and supplies. Currently these items are stored outside, moving them inside should extend their life and improve working conditions for the employees.

#### PROJECT DESCRIPTION / NECESSITY

Water Treatment Plant Filter Building 2 Concrete Wall Repair Filter Building 2 at the Water Treatment Plant (WTP) provides half of the filtering capacity for the City of Loveland. The concrete housing the filters has aged and portions have become soft, degraded, and there have been isolated leaks. Repair of the aging and failing portions of the concrete will be repaired.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1N/AAll Projects

#### PROJECT DESCRIPTION / NECESSITY

Water Treatment Plant Fire Pump Load Shedding.
If there is a power outage at the Water Treatment Plant (WTP) an existing backup generator turns on to ensure the treatment process continues. The existing backup generator is not sufficiently sized to continue water treatment and power the fire pump. Therefore certain large power demand processes at the WTP will have to be shutdown and the generator capacity switched to the fire pump system. The project will include running power feeders and programming.

#### PROJECT DESCRIPTION / NECESSITY

The FME Safe Integration Software will allow us to set up data translations to other data models for the full use of other (non-ArcFM) Esri Maps and Apps. Also, this will help in automating data translations and hopefully scheduled tasks to run integrated data updates on a re-occurring basis. With the introduction of many new software solutions to Water and Power with the addition of a municipal fiber utility, we have the potential of many silo packages. The other option would be to use professional services to complete the integrations. In doing so, we lose the knowledge to create and maintain the integrations and will restrict potential in-house growth when new software is introduced.

## PROJECT DESCRIPTION / NECESSITY

Total Organic Carbon Analyzer Replacement - \$36,360

The WQ Lab analyzes Total Organic Carbon (TOC) on a regular basis for both process and regulatory needs. The current TOC analyzer is supported as an "End of Life" contract. This means that this instrument is obsolete and parts may not be available if it was to breakdown. The life of a TOC analyzer is approximately ten years. Our current TOC analyzer is nine years old. To continue running TOC inhouse the current instrument should be replaced in 2019 with a replacement schedule of every 10 years.

#### Sonde Replacement - \$27,170

The WQ Lab performs source water monitoring in our reservoir and the BT River, including a Pre-Warning Station at the Narrows Park in the BT Canyon. Our main source water instrumentation currently includes three sondes. A sonde is an instrument that contains probes that measure numerous parameters and transmit data. One sonde is used at the WTP intake structure for reservoir monitoring, with the second sonde in place at the Narrows River Station, the 3rd sonde is portable and can be easily transported and used in the Big Thompson River during Source Water Sampling (to the Eastern Portal). The data that the lab is able to generate for operations and source water quality is invaluable (nutrients, TOC, E.Coli, Alkalinity, Conductivity, Turbidity, pH, DO along with algae for T&O mitigation). This is to replace one sonde every 5 years to keep the equipment up to date.

PROJECT DESCRIPTION / NECESSITY

DCWP is a domain controller. A domain controller is a server computer that responds to security authentication requests (logging in, checking permissions, etc). A domain is a concept whereby a user may be granted access to a number of computer resources with the use of a single username and password combination.

## PROJECT DESCRIPTION / NECESSITY

Purchase Vehicle #2110 - \$5,300

#2110 is a 2015 Ford Escape that was previously leased.

Replace Vehicle #6141 - \$54,000

#6141 will be 17 years old when replaced in 2020. Fleet recommends replacing in the 12-15 year range.

Replace Vehicle #6144 - \$37,500

#6144 is a 2006 Chevy 3/4-ton, 2WD, with a utility body. It will be 14 years old & have over 100,000 miles when replaced in 2020.

Replace Vehicle #5122 - \$105,000

#5122 is a 2003 Chevy 1-ton pickup, 4WD, with a utility body, & crane. It will be 16 years old & have over 100,000 miles when replaced. The 3,000 pound crane is under-sized for the current workload and will be upgraded to a 4,000 pound crane.

#### PROJECT DESCRIPTION / NECESSITY

Colorado Big Thompson (CBT) Water Purchases are one of the identified ways in the City's Raw Water Master Plan to acquire additional water for the City. The City was successful in late 2011 and early 2012 in purchasing a relatively large amount of CBT at a reasonable price. This project is to plan for funds to allow flexibility and responsiveness to consider and execute purchases of CBT water should desirable opportunities occur. Staff actively monitors the markets and negotiates with potential sellers.

#### PROJECT DESCRIPTION / NECESSITY

Adding a downstream storage reservoir would increase our water right portfolio firm yield by providing a place to store reusable water sources when the exchange potential is limited, for later exchange when river flow conditions improve. The Land, which includes a 100 acre abandoned gravel pit located downstream from our wastewater treatment plant, was purchased in 2019. This is for the design of the necessary piping and pump station which would begin in 2029.

#### PROJECT DESCRIPTION / NECESSITY

Down Stream Storage Armoring

Due to erosion from waves to the banks of the reservoir it is necessary to install riprap along the banks of the reservoir. The riprap armoring will not only prevent nuisance erosion but also protect the bank of the reservoir from significant erosion that could threaten the structural integrity of the embankment.

#### PROJECT DESCRIPTION / NECESSITY

The Great Western Reservoir was part of a property purchase for approximately 120 acres made by the City of Loveland. The property was purchased from Jake Kauffman & Son, Inc. in 2019 and the property included a reservoir designed to hold at least 1,300 acre feet (AF) of water. This site was historically known as Great Western Pit No. 3. The gravel pit has been sealed from the groundwater, tested according to the State's standards, and now is recognized by the State as a functional lined storage reservoir. Additional infrastructure including pumps and pipelines will be required to make the downstream storage useful to the City. The site is ideally located on the north side of the Big Thompson River downstream from the City's waste water treatment plant outfall, and upstream of Hillsborough Dam, where the City's return flows are required to be made. Using this site, the City can exchange reusable water upstream to the water treatment plant, make required return flows to the river under the terms and conditions of its decrees, and provide augmentation flows for municipal uses or other commitments.

#### PROJECT DESCRIPTION / NECESSITY

When the Green Ridge Glade Reservoir was built raw water from the Colorado Big Thompson (CBT) was conveyed around the construction through three 18" diameter high density polyethylene (HDPE) pipes. As a way to provide greater flexibility and reduce the risk of poor water quality entering the Water Treatment Plant (WTP) the City intends to enable the two remaining HDPE pipes to convey raw water from the Charles Hanson Feeder Canal directly to the WTP. This would help Operations staff ensure quality drinking water during periods of high taste and odor causing algae levels in the Green Ridge Glade Reservoir.

#### PROJECT DESCRIPTION / NECESSITY

The Heikes water is a Priority No. 1, irrigation contract right on the Big Thompson River for 1.75 cubic feet per second (cfs). It has historically been diverted at the Hillsborough Ditch river headgate. The City of Loveland purchased this irrigation right in 1965 from Jo Anne Heikes. The 2023 budgeted item is to file an application in Colorado Water Court to change the water right to include storage, municipal use, use by exchange, and possibly other uses. The budgeted item includes the legal and engineering fees during the first year of filing the application. One of the future intents of this water right is store it in the City's downstream storage reservoir, referred to as Great Western Reservoir, and by an exchange on the Big Thompson River, divert the water at the City's Water Treatment Plant. The water may also be diverted for irrigation at one of the City's parks or public facilities.

PROJECT NAME
RAW WATER-WINDY GAP FIRMING

PROJECT PRIORITY #

PROJECT # 2038AA

PROJECT AREA

NA

#### PROJECT DESCRIPTION / NECESSITY

Loveland is an original participant in the Windy Gap Project (40 units). When paired with storage from the Windy Gap Firming Project (WGFP) it will provide over 4,000 acre-feet (af) of firm yield, approximately 14% of the City's projected need for 30,000 af firm yield. The WGFP is planned to have 90,000 acre feet of storage to hold water developed in the original Windy Gap Project, with Loveland subscribing to 9,451 acre feet of storage space. The project has received approval from the Corp of Engineers Section 404 Permit. The Participants, including the City, are working with FirstSouthwest and Northern Colorado Water Conservancy District to compare individual or pooled financing. Then the project can move ahead to engineering design, construction, and bringing online this vital project. Current projections are that first fill may occur by 2021. 1% for the Arts is not applicable to this project, because the project is the Municipal Subdistrict's and the City is merely a contributor. This is the increase in cost from what was budgeted for 2019.

#### PROJECT DESCRIPTION / NECESSITY

The City has an abandoned wastewater treatment plant located at Railroad Ave. and 3rd St. SE. There is an existing active 15" sanitary sewer that runs through the abandoned plant and poses a safety concern. This project will re-route the sanitary sewer out and around the abandoned plant site.

#### PROJECT DESCRIPTION / NECESSITY

There is a development planned for the northwest corner of 42nd St. SE and S. Lincoln Ave. (S. Highway 287). In order to serve this location the developer is responsible for installing sanitary sewer from S. Saint Louis Ave. and E. Highway 402. The City is responsible for paying for oversizing, or for the capacity needed, in excess of the development's needs, to meet the master plan pipe size.

#### PROJECT DESCRIPTION / NECESSITY

Sanitary sewer lift (pump) stations are critical pieces of infrastructure that have to function at all times. When an electric outage affects a lift station the sewer pumps are unable to function and sewer begins to back up. Therefore sanitary sewer lift stations have backup generators to supply power in outages. The generator at the Boedecker Lift Station has exceeded its useful life and must be replaced to continual uninterrupted service.

PROJECT DESCRIPTION / NECESSITY

Bus Barn & Taft Lift Station Renovation

The Bus Barn electric service includes single phase power converted to 3-phase. The back-up generator is also single phase, requiring a phase converter to operate this station from the grid or generator. This project includes running 3-phase power to the facility and modifying the generator to 3-phase (or generator replacement if necessary). The Taft Lift Station needs new rails, wetwell coating, and new hatch/lid

#### PROJECT DESCRIPTION / NECESSITY

WW-310 - East Side Lift Station 3rd Pump Install

The Eastside Lift Station is located at the intersection of East 1st St. and Sculptor Dr. The lift station pumps sewage from all of the collection system northeast of the station. As growth in the eastern portion of the City continues the associated sewer flows increase. With these increased flows the existing two sewer pumps will become insufficient to pump peak flows and provide sufficient redundancy. This project will install a third submersible pump and equipment necessary for the lift station to meet demands while providing required redundancy. The design will occur in 2025. Services during construction and construction will occur in 2026.

#### PROJECT DESCRIPTION / NECESSITY

WW - East Side Lift Station Overflow Vault

The East Side Lift Station has an overflow pond situated next to it should there ever be a backup of sanitary sewer flows. It is the City's desire to convert this pond into a concrete vault to serve the same purpose. The vault would allow for better cleaning and less environmental impact in the event of an overflow discharge. The design will occur in 2025. Services during construction and construction will occur in 2026.

#### PROJECT DESCRIPTION / NECESSITY

This project includes the design and construction of a new wastewater main and lift station. The main(s) will be designed to maximize gravity flow, but will need a regional lift station to collect wastewater. A condition of annexation was agreed upon for the Olson Annexation that the City would provide wastewater service to the Annexation upon development.

#### PROJECT DESCRIPTION / NECESSITY

As development occurs, private developers design and install wastewater infrastructure to serve their project. When the City anticipates additional capacity is desired to serve wastewater needs above and beyond that which is related to the proposed development, the Utility may require a larger pipeline to be installed by the Developer. The Utility reimburses the Developer for these increased costs through the Extension and Oversizing Program. Future wastewater main alignment and sizes have been planned for in the Water/Wastewater Master Plan.

#### PROJECT DESCRIPTION / NECESSITY

Replacing aging infrastructure is a growing need within the utility. Typically, most communities face increasing rehabilitation costs as the age of installed infrastructure advances.

PROJECT DESCRIPTION / NECESSITY

In order to adequately convey sanitary sewer flow from future customers the existing sanitary sewer located in South Colorado Ave. needs to be upsized from an 8" pipe to a 15" pipe. This work is planned for 202 because there is substantial stormwater and waterline improvements planned for the area. Coupled with this work will be a rebuild of the street section. Portions of the new sanitary sewer will be paid for by future developers.

#### PROJECT DESCRIPTION / NECESSITY

WW - Final Clarifier #4 & RAS/Scum

As flows continue to increase to the wastewater treatment plant (WWTP) an additional secondary (final) clarifier will be required to clean plant effluent. In addition to the needed additional capacity in the final clarifier new pumping, piping, and valving will be needed to convey return activated sludge (SAS) and scum to the A-basins and digesters.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREANo Project1WWFUTNA

#### PROJECT DESCRIPTION / NECESSITY

All of the flow that enters the wastewater treatment plant (WWTP) flow through the headworks, and into a wetwell where the flows are then pumped to the primary clarifiers. The existing wetwell has sustained damage to the concrete from the hydrogen sulfide gases that are generated from turbulent wastewater flows. In order to repair the wetwell and place a protective coating all of the flow will have to be bypass pumped.

PROJECT NAME
WASTEWATER GENERAL PLANT

PROJECT PRIORITY #

PROJECT # WW930 PROJECT AREA NA

#### PROJECT DESCRIPTION / NECESSITY

Interactive voice response is a technology that allows a computer to interact with humans through the use of voice and DTMF tones input via a keypad. In telecommunications, IVR allows customers to interact with a company's host system via a telephone keypad or by speech recognition, after which services can be inquired about through the IVR dialogue. IVR systems can respond with pre-recorded or dynamically generated audio to further direct users on how to proceed. IVR systems deployed in the network are sized to handle large call volumes and also used for outbound calling, as IVR systems are more intelligent than many predictive dialer systems.

### PROJECT DESCRIPTION / NECESSITY

FB Network Construction (Bear

Transfer for 1% for the Arts for year 2 spending of the network construction.

The network construction is the cost of building a fiber-optic network to pass by every property, business, or residence for connection to the network. This includes the materials, labor, trenching and boring, fiber and equipment installation, and landscape restoration.

The capital portion of the Network Construction was all budgeted in 2019.

## PROJECT DESCRIPTION / NECESSITY

An OTDR (Optical Time Domain Reflectometer) certifies the performance of the fiber-optic networks by measuring and verifying the loss of individual splices and other components in a fiber link. It also locates fiber breaks, excessive bends in fiber, and other problems that create loss of optical power (light).

### PROJECT DESCRIPTION / NECESSITY

The Service Van is utilized for the installation, operation, and maintenance of the fiber-optic feeder and distribution network. This vehicle will be branded with the utility logo and utilized by Field Service and Installation Technicians.

This is for two vans to be purchased in 2020 and two vans to be purchased in 2021

#### PROJECT DESCRIPTION / NECESSITY

SWA - 22nd Street Storm Sewer (Van Buren to Taft)

This project will provide a master planned storm sewer system from Lake Loveland across Taft Avenue and west up 22nd Street to Van Buren Avenue. The primary problem area is the 22nd Street and Taft Avenue intersection with minor drainage problems occurring further west. This project may be phased to address the most immediate problem area while providing for the allowance to extend the storm sewer west in 22nd Street.

#### PROJECT DESCRIPTION / NECESSITY

SWA - 29th & Sheridan Stormwater Improvements

This project will reduce flooding problems at 29th Street and Sheridan Avenue. This project includes the installation of an underground storm drainage system which will outlet into the Lake Loveland Outlet Channel on the north side of 29th Street.

### PROJECT DESCRIPTION / NECESSITY

SWA - Boyd Lake Outlet Ditch Improvements

This project will mitigate existing erosion problems within the Boyd Lake Outlet Ditch between Eisenhower Boulevard and 5th Street, directly east of Kohl's. We jointly utilize this irrigation return flow ditch to convey stormwater runoff to the Big Thompson River. In accordance with the 1984 agreement between the City and the Greeley & Loveland Irrigation Company, we are required to make necessary improvements to the ditch in order to convey stormwater to the river.

### PROJECT DESCRIPTION / NECESSITY

This project will reduce historic flooding problems within the residential neighborhood located between Garfield Avenue, Taft Avenue, 1st Street, and Eisenhower Boulevard. This project includes the installation of an underground storm drainage system which will outlet into the Big Thompson River south of 1st Street. The Stormwater Long-Term Financial Plan calls for the addition of a 1.0 FTE Civil Engineer in 2021 to assist with managing capital projects (the Garfield & Harrison Outfall project as well as others in order).

#### PROJECT DESCRIPTION / NECESSITY

This project will provide a master planned storm sewer outfall from the Big Thompson River to the Hogback Basin crossing of Eisenhower Boulevard just east of Cascade Avenue, including local drainage connections at the highway. This project has moved up in priority due to over topping of Eisenhower Boulevard twice in 2014 and 2015.

#### PROJECT DESCRIPTION / NECESSITY

This annual program addresses deteriorating storm drainage infrastructure within the City. This program includes the replacement of inlets, manholes, storm sewers, channel re-grading, detention pond retrofits, and installing stormwater quality improvements. The annual funding was at \$400,000 per year prior to 2020, but will be increased for anticipated inflation in future years. This annual program will be reduced in 2020 only due to the size of the S. Loveland Outfall Phase 3 construction project. Maintenance projects are prioritized and scheduled to remain within the allocation.

### PROJECT DESCRIPTION / NECESSITY

SWA - South Loveland Outfall (Phase 3)

Phase 3 of a 3 phase project to reduce flooding problems within the residential neighborhood located between 14th Street SW and 23rd Street SW, and from Colorado Avenue to Taft Avenue in the Sherri Mar Subdivision. This project includes the installation of an underground storm drainage system through key areas of the subdivision.

PROJECT DESCRIPTION / NECESSITY

This project will provide a master planned storm sewer outfall from the Big Thompson River to the Wilson & Eisenhower intersection then continued north in Wilson Avenue to approximately 22nd Street. The lower end of the outfall system was constructed in 2018 with the Wilson Avenue Flood Mitigation Project. The system will be extended north to the Wilson Avenue and 8th Street intersection in 2019. Design of the rest of the system north of 8th Street is anticipated to begin in 2025 with construction planned for 2027 and 2028.

### PROJECT DESCRIPTION / NECESSITY

SWA - New & Replacement Equipment

This project accounts for the replacement and acquisition of vacuum trucks, street sweepers, trucks, and other equipment necessary for stormwater maintenance operations. For 2019, replacement of the division's vacuum truck, a street sweeper, and a pickup truck is planned. The Stormwater Long-Term Financial Plan calls for the addition of a 1.0 FTE Equipment Operator in 2021 to assist with the operation of additional equipment as the City grows.

### PROJECT DESCRIPTION / NECESSITY

The irrigation system at Cattail Creek golf course is 30 years old and failing at each joint. The piping in the irrigation system has also reached the end of its life span. Daily leaks require large amounts of labor and parts to repair and could impact play at the course. In the near future we will need to replace the entire irrigation system.

PROJECT NAMEPROJECT PRIORITY #PROJECT #PROJECT AREAGolf - Mariana Butte Golf Course Projects120P-51-19-102CIP-51-19-102

### PROJECT DESCRIPTION / NECESSITY

The Mariana Butte pumpstation was installed in 1991 and the fire suppression was added in 2009. The controller will be updated to a variable frequency drive and the steel piping, pumps, and motors will be replaced to allow for improved energy efficiency and enhanced operation. Due to the update of the variable frequency drive, the pump station replacement should qualify for the Platte River Power Authority Efficiency Program.

CIP-51-19-232

### PROJECT DESCRIPTION / NECESSITY

The Olde Course clubhouse is near the end of its life cycle. The current building will be replaced with a new clubhouse facility, the size and exact location of which is still being determined. Staff is undertaking a feasibility study and is taking the project through preliminary planning processes (CRT). Following that, a design concept and updated cost estimates will be known.

# 2020-2029 Capital Improvement Program Horizon Projects List

Indicates project on Community Improvement Program list

This is a summary list of unfunded projects not included in the 2020-2029 Capital Improvement Program (CIP). These projects have been identified as capital needs, however, are not affordable under current 10-year revenue forecasts. Projects are listed by Plan Type and service area and are not listed in priority order. Cost Estimates include all funding sources (internal and external to the City).
